## Our Program

Established in 1884, the Mackenzie family is approaching its 5th generation of owning and operating an innovative, fully integrated genetics to plate Angus Beef Cattle Business.

We believe that the key to this is having a female herd backed by generations of high fertility, high-performance maternal genetics. The strength of our cow herd is paramount.

Macka's passion and dedication to breeding the highest quality Angus cattle that thrive in their environment utilising the latest technologies such as Embryo Transfer, Artificial Insemination, and the use of the leading genetics from all over the world.

Macka's also operate a Seedstock breeding program that produces high-performance Angus Bulls for their commercial breeding operation and other key partners.

Our focus on sustainable farming sees the use of best practices implemented to ensure we look after our soils, pastures and cattle health to allow for the production of the best Angus in our environment.
